

General Form

9/6

$$A(t, n, k) = A_t(n, k)$$

in the case $t=n, k=2$

$A(n)$ is the sequence in OEIS A175176

Varying t with $k=2$ ^{maybe} provides some formulas in terms of n

$$A_1(n) = 2n - 1$$

$$A_2(n) = 4n^2 - 4n - 5$$

$$A_3(n) = 8n^3 - 12n^2 - 30n + 1$$

Mapping onto the form found in 9/4

$A_1(1), A_2(2), \dots, A_n(n)$

$A_1(1)$
 $A_1(2)$
 $\vdots$
 $A_2(2)$
 $A_2(3)$
 $\vdots$
 $A_3(3)$
 $A_3(4)$
 $\vdots$
