

9/20

1.) Appell Anomaly

We predict $A'_5(n) = 10 A_4(n)$

and it fits for $C=31$ at
 $A_5(n)$ ~~on~~ $5 \leq n \leq$
 $n = 5, 7, 8, 9$

but for $A_5(6) \Rightarrow C=11$
 so -20 error

WHAT!?

2.) We need data for $n=10$

3.) Bondy Identity + Appell Sequence

$$A_{n-1}(n) = A_n(n) \quad Q_t(n) = \frac{A_t(n)}{2^t}$$

$$Q'_t(n) = t Q_{t-1}(n)$$

$$Q'_n(n) = 2n Q_n(n)$$

Appell

But it doesn't
 work for $A_5(6)$

Prove this for an easier way to
 see Appell or boundary
